London, UK

https://github.com/CharlieHodgkinson

https://linkedin.com/in/charlotte-hodgkinson-669349174/

SKILLS

Languages

- Typescript/ Javascript
- Python

Infrastructure

- AWS (lambda, api gateway, etc)
- IAC/ Terraform

Libraries

- React, React Router
- Vite, Express, Webpack
- Emotion, Radix
- Storybook, Chromatic

Testing

- Cypress, Cucumber, Playwright
- Jest, React Testing Library

Tools

- Yarn, NPM, PNPM
- Monorepos: NX, Moonrepo
- Gitlab, Github
- Claude code, CoPilot, Cursor

Methodologies

- Agile, Kanban, Scrum

PROFILE

Software Engineer with 6+ years of experience building production software across AI media technology, ecommerce and financial services. Specialised in TypeScript, React and frontend architecture, with experience developing complex applications, APIs and integrations across startup and enterprise environments. Experienced in leading features from architecture and implementation through to production, working closely with customers and cross-functional teams to solve complex technical and product problems.

EXPERIENCE

SOFTWARE ENGINEER

Flawless AI | London | 2025 - PRESENT

- **Led development of an Avid Media Composer extension from the ground up**, enabling editors to create AI-powered visual dubs. Built a TypeScript, React and Vite SPA embedded via QtWebView, integrating with Avid's desktop SDK through a generated protobuf/gRPC-Web client with event streaming and authentication.
- **Selected by Avid as one of two partners featured in the Extensions Spotlight for Media Composer 2026.8**, with the extension subsequently demonstrated at IBC.
- **Built complex video workflows for localisation and in-video ADR**, including character refinement, timeline editing and media management across Flawless' TrueSync and DeepEditor products. These capabilities supported production of the world's first theatrically released full-length feature film using AI-powered immersive dubbing.
- **Developed real-time video playback and editing functionality** using GraphQL APIs and webhooks, and contributed to Python-based Temporal workflows supporting asynchronous media-processing pipelines.
- **Worked directly with customer feedback to diagnose production issues**, performing root-cause analysis across frontend applications, APIs and third-party integrations and translating feedback into product fixes and UX improvements.
- **Contributed to a shared design system**, developing reusable table and UX components and designing and building a theme provider that enabled application-wide rebranding without customer-facing disruption.
- **Improved frontend reliability and maintainability** by introducing Storybook integration testing into CI/CD pipelines, strengthening application-level error handling with Datadog RUM, and building user-action dashboards to accelerate issue detection and investigation.

EDUCATION

Software Development Foundation Degree *(First-Class Honors)*
Ada. National College for Digital Skills
London | 2019 - 2021

Software Developer Level 4 Apprenticeship
British Computer Society
London | 2019 - 2021

Computer Science Level 3 BTEC *(distinction)*
Tresham College
Kettering | 2018 - 2019

PROJECTS

Co-organiser - Smells Like Queer Spirit
London | 2026 - PRESENT

- Co-organise a quarterly live music and DJ event focused on alternative and rock music, creating a queer-centred community space.
- Coordinate event planning, logistics, performers and social media promotion alongside other organisers.

INTERESTS

- Arts and crafts, including crochet, sewing and oil painting.
- Board games, particularly Terraforming Mars, and card games such as Magic: The Gathering.
- Rock, alternative and queer pop music, especially seeing bands live.

EXPERIENCE continued

FULL STACK SOFTWARE ENGINEER

Wealth Wizards | Leamington Spa (remote) | 2022 - 2025

- **Built 10+ SaaS applications** using TypeScript, React and AWS, following a micro-frontend architecture and mobile-first approach and ensuring compliance with WCAG AA accessibility standards.
- **Led development of a pension contributions tool** deployed with three clients and used by more than **8,000 users**.
- **Contributed to a pension guidance tool** that, within six months of launch, facilitated more than **65 pension consolidations representing £1.35m in transferred assets**.
- **Designed and implemented APIs for complex financial calculations**, applying functional programming concepts to model and process financial data within a highly regulated environment.
- **Embedded micro-frontend applications into live sites** of several different clients with authentication using AWS Cognito, and provided ongoing maintenance and support.
- **Developed within an Nx monorepo containing 30+ applications and libraries**, using GitLab CI/CD pipelines for automated testing and deployment.
- **Contributed extensively to a shared design system** built with Emotion, Storybook and Chromatic, developing reusable atomic components and customisable themes to support multiple clients.

SOFTWARE DEVELOPER (Backend/ DevOps)

RS COMPONENTS | CORBY | 2019 - 2022

- **Designed and built scalable serverless APIs** supporting the migration of master product data to the cloud.
- **Built microservices for product data transactions**, and contributed to migrating services from a legacy monolith to a serverless cloud architecture.
- **Developed and maintained GitLab CI/CD pipeline templates**, providing engineering teams with tooling and guidance for secure, automated deployments and security best practices.
